

## Journals

- how to locate specific journal titles in paper or online

The Technical Information Center of Denmark, DTU Library, has developed a specific database for locating journal titles called **List of Journals** in Science, Technology & Medicine.

### Content

To guide users to the data they need, the resources are divided in two parts:

#### 1. Journals at the Technical Information Center of Denmark

This is the complete list of journals at DTU Library.

With this tool you can see exactly which journals DTU Library provides access to, and how you find them. In every journal description you will find information on whether you have full text access to the journal articles directly, or if the journal is only available in paper at DTU Library.

#### 2. Journals in science, technology and medicine

In this part you can search for journals at DTU Library and other technical libraries as well as other databases. When a journal is located at DTU Library, you will be given access information. If a journal is located in one of the other technical libraries or databases, you must order the article via ALIS – the library catalogue.

### How to get the articles

- When locating articles from the paper based journals, **List of Journals** will link you directly to ALIS – the library catalogue. In ALIS you can either order the article, or you can find the shelf mark location in the library.
- When locating articles from the journals with electronic full text, **List of Journals** will link to either DADS – Digital Article Database Service - or the homepage of the journal, where you can download the articles directly.
- When locating articles from journals not available at DTU Library, you must order these via the Special Order function in ALIS

### Access

We provide public access to search for journal titles in List of Journals, but to gain full text access you need to login with your DTU login or visit us.
